

Emergency Medical Suite

Strategic Operations Inc. is a leader in creating Hyper-Realistic™ immersive and interactive simulation environments. The Hyper-Realistic™ Emergency Medical Suite is available to the medical community for their simulation training needs. The facility features the highest fidelity possible for training emergency or routine operations in a medical facility with complete turn-key support.

The Emergency Medical Suite is a 1520sq ft (463sq m) facility with six modern hospital beds and two trauma resuscitation areas which may also be used for operating theaters.

All patient treatment areas are equipped with:

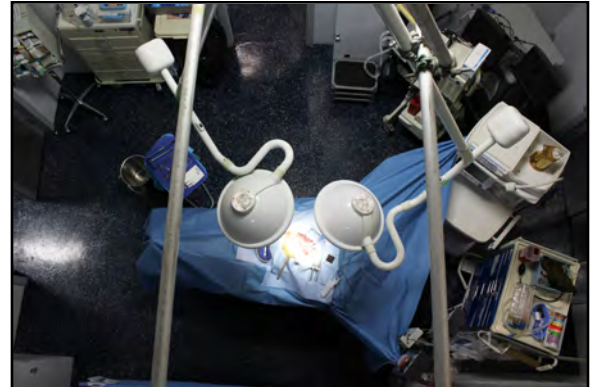

- Modern hospital bed
- Electrocardiogram
- Non-invasive blood pressure
- Pulse oximetry
- Crash Code carts and Accessories
- Proctor controlled simulated vital signs and Imagery

The Emergency Medical Suite also has:

- Ambulance entrance
- Triage area with seating
- Nurse's station
- Procedure lighting
- Complex adjacent training areas (for simulated incidents)

Emergency Medical Suite

All aspects of emergency department medical treatment operations can be conducted with minimal set up, logistical worries, or cleanup. Your training cadre can devote maximum effort to training.

A broad range of simulation services and products including but not limited to the Partial Task Human Worn Surgical Simulator (aka "Cut Suit"), professionally trained, standardized patient actors, pyrotechnic devices, TV / Movie quality special effects makeup artistry, and a variety of proprietary casualty simulation products are available. "If you can imagine it, we can simulate it."

A video transmission system allows instruction staff to log in remotely to pan, tilt, zoom, and record training operations for real-time feedback or after action critique and review.

Catwalks above the training areas allow training staff and students to observe operations without interference.
